Research Summary

Ph.D. student studying **uncertainty and error estimation in neural networks**, with a focus on **Kolmogorov–Arnold Networks (KANs)**.

Education

Ph.D. in Computer Science, The University of Texas at El Paso (GPA 4.00) Jan. 2025 – Present

M.S. in Data and Information Science, The University of Texas at El Paso (GPA 3.72) Aug. 2022 – Dec. 2024
Thesis: Machine learning for water-use prediction.

B.S. in Materials Engineering, Autonomous University of Ciudad Juárez (GPA 3.88) Aug. 2017 – May 2021

Research Experience

Doctoral Researcher | *The University of Texas at El Paso* Jan. 2025 – Present

- Proposed adaptive optimizer sequencing for KANs (L-BFGS first), validated by ablations vs. baselines [1].
- Released open-source code with a reproducible experiment-tracking workflow.
- Turning trained KANs into readable mathematical formulas (Julia) to make models explainable.
- Developing methods to estimate model confidence and error, including Hessian-based analysis.

Graduate Research Assistant | *The University of Texas at El Paso* Jan. 2024 – Aug. 2024

- Built deep learning models to predict urban water use; led to two MICAI publications and my M.S. thesis.

Publications

Industry Experience

Data Science Intern | *North American Development Bank* May 2024 – Aug. 2024

- Built a Python system fusing climate, financial, and geospatial data to flag project risk early.
- Automated managers' manual project-status reporting with Power BI dashboards (80% less time).

Test Engineer | *Foxconn* Dec. 2021 – Aug. 2022

- Automated server testing and failure analysis using Python and Bash.

Teaching Experience

Graduate Teaching Assistant | *The University of Texas at El Paso* 2023 – Present

CS 4381/5381	Cross-Platform App Development *(Dart, Flutter)*	Summer, Fall 2026
CS 4342/5342	Database Management *(SQL, relational design)*	Fall 2024 – Spring 2026
CS 2401	Data Structures and Algorithms *(Java)*	Spring, Fall 2023

Skills

ML & Statistics	Uncertainty quantification, probabilistic modeling, interpretable/symbolic ML, federated learning
Optimization	Second-order methods (L-BFGS), Hessian analysis, optimizer scheduling
Experimentation	Ablations, baselines and metrics, reproducible pipelines, open-source research code
Sci. Computing	Python (PyTorch, scikit-learn, NumPy), Julia
Software	Java, SQL, Dart/Flutter, Git, Linux, LaTeX
